

OCR Project

Overview

I have multiple PDF files with lists of names. The PDFs are scanned. The names are in 2 columns (see exceptions below). Some of the names are crossed out, that's very important to still be able to read the name and be able to identify the name has been crossed out.

I'm looking for someone to write a script to convert those PDFs into Excel format. Other formats are also acceptable if that makes things easier.

Some of the text of the PDFs needs to be ignored.

If someone is looking to do a manual data entry, please specify in your submission. Ideally I'd like to find someone who is going to use OCR and a script to convert these PDFs into text format.

I would require accuracy of 99.9%. I will be spot checking this a lot.

All the names are in English.

There are 131 total PDF files with about 20 pages in each file. Not all pages have names on them (more on that later).

Data Examples

Most of the names are in 1 or 2 columns:

Here is an example for 2 columns

In both cases we would like the output to be 1 list of names in 1 column in Excel with all the names. Just because names have been on the same row means nothing. We want to treat each column separately.

Expected Output

Ideally all the names would be converted into an Excel file with the following columns:

The "Crossed Out" means if this individual name has a crossed line over their name.

Some people might also have a small "checked" mark next to their name, we only look for the crossed out name.

It could be that some letters are special characters like this one:

Polling District - Kilgarvan [AU]	Electoral Division of Flesk (Part Of)	Electoral Division of Flesk (Part Of)
		Polling Station: Kilgarvan School. Booth 2 - E.D. of Flesk (Part Of)

These could be any of these characters:

á, Á, ó, Ó, ú, Ú, í, Í, é, É

It's ok to convert them in the output file as: a, A, o, O, u, U, l, l, e, E if that makes things easier.

If you can include a special character in the output, that's even better.

There won't be any other special characters and definitely not in other alphabet.

There are pages with only 1 column of names and it's very short:

Polling District - Cromane [FR]	Electoral Division of Caragh (Part Of)	Polling District - Cromane [FR]	Electoral Division of Caragh (Part Of)
		Polling Station: Cromane Nat. School Booth 1 - E.D. of Caragh (Part Of)	
		Dooaghs Glenbeigh	(3)
		739 O'Connor, Marie	V93 E9D5
		740 O'Sullivan, Sandra	An Teach Dubh V93 TD72
		741 Inglis, Paul	Pinewood V93 FY06
		Illaunstookagh Killorglin	(1)
		742 O'Sullivan, Donna	Illaun House V93 N2K0
		END OF POLLING STATION: Cromane Nat. School Booth 1 within Electoral Division of Caragh (Part Of)	

Scope

You need to write a script which will go over all files, look at all pages, ignore all the scenarios mentioned above, find all the names and generate one Excel output with all the names, their address and which names have been crossed out or not.
